

The New  
Generation of  
Tall Fescue.  
West Coast Turf's  
exclusive  
West Coaster  
sod produces the  
ultimate lawn!

We use the finest quality semi-dwarf tall fescue seed for the highest turf quality available. West Coaster has a beautiful dark green color, with lasting wear tolerance and excellent disease resistance. It is more drought tolerant, recovers from drought better, and uses less water than the older varieties of semi-dwarf tall fescue. West Coaster can endure partial shade, as well as heat, and is ideal for home lawns, landscapes, and parks. It performs well in coastal California, as well as the cool inland valley and high desert environments. West Coaster seed is available for easy repairs.

## FEATURES AND BENEFITS

### Color

- > Beautiful dark green

### Texture

- > Medium

### Performance

- > Provides year round green in the southwest
- > Deep root system provides drought and heat tolerance
- > Good drought recovery
- > Excellent adaptability and can thrive in a wide range of soil types
- > Once established, provides superior wear tolerance

- > Dense growth habit make it highly resistant to disease
